

Enable RDP on target machine

The image shows a Windows 7 desktop environment with the 'System and Security' control panel window open. Red circles and arrows highlight the steps to enable Remote Desktop:

- Control Panel Home** > **System and Security**
- System and Security** > **Allow remote access** (under Windows Firewall)
- System Properties** window, **Remote** tab:
 - Remote Assistance**: ☒ **Allow Remote Assistance connections to this computer**
 - Remote Desktop**: ☒ **Allow remote connections to this computer**
 - ☒ **Allow connections only from computers running Remote Desktop with Network Level Authentication (recommended)**
 - Select Users...** button
- Remote Desktop Users** window:
 - SOS\Domain Users** is listed.
 - Add...** button is highlighted.

GPO to bypass RDP/CredSSP authentication error

The image shows a Windows Group Policy Management console on the left and the Encryption Oracle Remediation policy settings on the right. Red circles and arrows highlight the steps to create and enforce the GPO.

(1) create GPO

Group Policy Management Editor

Credentials Delegation

Encryption Oracle Remediation

Options:

Protection Level: **Vulnerable**

(2) enforce GPO

```
Administrator: Command Prompt
Microsoft Windows [Version 10.0.14393.590] (c) 2016 Microsoft Corporation. All rights reserved.
C:\Windows\system32>gpupdate /force
Updating policy...

Computer Policy update has completed successfully.
User Policy update has completed successfully.
